

Y50-180 Puller with 235 mm - 540 mm spread, 660 mm reach, without hydraulic hollow piston cylinder

DESCRIPTION

The pullers of series Y-180 are used together with separating knives and internal extractors for pulling particularly large and stubborn bearings, gears, discs, etc. in trades, industry, and workshops. The pullers are used with separating devices of series Y-15 and internal extractors of series Y-21-E.

APPLICATION AREA

For pulling particularly large and stubborn bearings, gears, discs, etc. in craftsmanship, industry, and workshop.

BENEFIT

- Ideal for the light and controlled removal of stuck parts
- Thanks to compatibility with other tools from the Y series, suitable for various applications
