

160-2-E Flange spreader Ø 250 - 1200 mm

APPLICATION IMAGE

DESCRIPTION

The flange spreaders of the 160 series are used in pairs for the safe and accident-free separation of flange connections of pipelines in power plants, petrochemical plants or offshore. They enable the separation of large and high-performance flanges and thus allow for easy maintenance work, even when a large access opening between the flanges is present.

APPLICATION AREA

To safely and accident-free separate the flange connections of pipelines in power plants, petrochemicals, or offshore.

BENEFIT

- After completing the work, the flanges will be returned precisely to their original position.
- Flange spreaders are the perfect solution for the repair of pipes and flanges.
- They can also be used for the exchange of bows, flange seals, and metal seals on couplings as well as for the maintenance of heavy equipment and many other tasks.

OPERATION

- Insert flange driver and disconnect the affected flange connection by actuation

MASTER DATA

GTIN [EAN]	4021176245886
Country of origin	DE
Case material	Tool steel
Series	160-2
Net weight [kg]	8,95 kg
Package contents	1 piece
Packaging Act	PAP 20
Global sales capability given	Yes (REACH, RoHS, POP, PROP65, TSCA)
