

30-2+ 3-jaw universal puller with quick adjustment jaws, up to 160 mm spread, 150 mm reach

APPLICATION IMAGE

DESCRIPTION

The 3-jaw universal puller with quickly adjustable jaws is used for pulling bearings, gears, and discs in all common sizes for craft, workshop, and industry. It allows for loosening any component that sits on a shaft and is freely accessible from the outside. Equipped with robust standard jaws and practical hand knobs, the puller all-rounder ensures a particularly safe, user-friendly, and non-destructive disassembly both for external extraction and internal extraction. The 3-jaw design guarantees an even load distribution and thus a particularly secure grip on the part being pulled.

APPLICATION AREA

For pulling off bearings, gears and pulleys

BENEFIT

- Simple manual release of the jaws using hand knobs (Quick Adjust Technology)
- 3-jaw ensures an even distribution of force and allows for greater pulling forces.
- Application also for eccentric components through freely movable, sliding puller jaws on the crossbar.
- Hexagonal profile on the crossbar for secure counterholding
- Quick-adjustable jaws guarantee immediate adjustment to any spread between 0 mm – 160 mm
- Anti-slip safety (spindle neck) suspension of the claw in the sliding piece (Armlock Technology)
- Secure installation of the spindle with rotatable spindle tip on both smooth surfaces and in centering (Switch Technology)
- Optional convertible from an external puller to an internal puller by reversing the jaws.
- Anti-slip safety (spindle neck) at the spindle head for safe work with the wrench
- Spindle outlet to protect the thread

OPERATION

- Position the puller jaws externally onto the part to be pulled off
- Slide the claws under the component
- Use the hand knob for manual fastening of the jaws
- Manually pull the spindle for fixation
- Set the hexagon on the spindle head in motion with a ratchet or a wrench until the component is loosened
