

43-2 2-jaw small parts puller with force-amplifying, self-centering jaws, up to 70 mm spread, 70 mm reach

APPLICATION IMAGE

DESCRIPTION

The handy 2-jaw puller with force-amplifying and self-centering jaws is used for the sensitive removal of small bearings, gears, and discs in tight, hard-to-reach spaces. The compact and space-saving design of the puller, with narrow jaws that widen towards the claw, is particularly suitable for electric motors. The freely movable pin on the T-handle ensures comfortable one-handed tightening of the spindle in the tightest of spaces.

APPLICATION AREA

For sensitive extraction of small bearings, gears and pulleys for narrow, poorly accessible gaps

BENEFIT

- Self-centering of the jaws through manual tightening of the spindle (Autogrip Technology)
- Integrated, freely movable pin on the T-handle ensures manual spindle drive in tight spaces
- The slim design of the jaws allows access to hard-to-reach areas.
- No additional tool is needed for the pulling process.

OPERATION

- Positioning the puller jaws from the outside on the part to be pulled off
- Swiveling the jaws under the component
- Manually pulling the spindle for fixation
- Moving the T-handle on the spindle head until the component is released

MASTER DATA

GTIN [EAN]	4021176015861
Country of origin	DE
Case material	Tool steel
Series	43
Net weight [kg]	0,24 kg
Package contents	1 piece
Packaging Act	PAP 21
Global sales capability given	Yes (REACH, RoHS, POP, PROP65, TSCA)

SPARE PARTS

- 43-1-206_Press spindle
- 43-1-T_Crossbar
- 43-2-70-P_2 jaws (pair)
