130-20 3-jaw universal puller "VARIO" with spring-loaded fall protection, up to 260 mm spread, 150 mm reach

DESCRIPTION

The 3-jaw universal puller "VARIO" with spring-loaded anti-slip safety is used for removing bearings, gears, and discs in all common sizes for crafts, workshops, and industry. This allows for the loosening of any component that is mounted on a shaft and is freely accessible from the outside. Equipped with robust, always parallel puller jaws, the puller ensures a particularly safe, non-destructive disassembly whether for external extraction or internal removal. The anti-slip safety prevents the puller jaws from slipping off the crossbar. The 3-jaw design guarantees an even load distribution, thereby providing a particularly secure hold on the part to be removed.

APPLICATION AREA

For pulling off bearings, gears and pulleys

BENEFIT

- Fall protection protects against the jaws sliding off the crossbar.
- By pressing down the safety latch, a particularly fast flipping of the jaws is guaranteed.
- 3-jaw ensures an even force distribution and allows for greater pulling forces.
- Application also for eccentric components through freely movable, sliding jaws on the crossbar.
- Variable adjustment to any span between 20 mm – 260 mm
- Secure mounting of the spindle through the rotatable spindle tip on both smooth surfaces and in centering (Switch Technology)
- Optional convertible from an external puller to an internal extractor by reversing the jaws.
- Anti-slip safety (spindle neck) at the spindle head for safe working with socket wrench.
- Spindle outlet to protect the thread

OPERATION

- Place the puller jaws from the outside onto the part to be pulled off
- Slide the claws under the component
- Manually pull the spindle for fixation under pressure
- Set the hexagon on the spindle head in motion with a ratchet or a box-end wrench until the component is released
