

KUKKO // *Pull forward*

HYDRAULIC

With power and precision

KUKKO.COM

HYDRAULIK

100 PERCENT STRENGTH

The robust hydraulic pullers from KUKKO are able to solve extreme pulling problems and thereby considerably increase efficiency.

The infinitely adjustable hydraulic strength makes it possible to work safely and in a controlled manner, using the full performance potential of the puller.

Hydraulic systems make hard physical work easier while also reducing downtime due to repairs and machine breakdowns.

Take advantage of our expertise and profit from our products and solutions.

KUKKO // *Pull forward*

CAPACITY | Power of KUKKO pullers

KUKKO HYDRAULIC HOLLOW RAMS

These hollow rams can be used both for pressing and for pulling.

1 non-operating state

2 working process

3 spring return

WITH 2- AND 3-JAW PULLERS

PRESS

The pressure pads (see page 42) can be placed into the female thread of the piston rod.
The center spindle can be placed directly in the threaded pressure pad or,
if a plain hole pad is used, fastened and adjusted with the quick-adjusting nut.
If a closed, serrated pressure pad is used, the cylinder can be used as a hydraulic jack.

WITH PUSH/PULLING DEVICE: INTERNAL AND SEPARATING

PRESS

LOAD - HYDRAULIC CYLINDERS & PULLERS

HYDRAULIC HOLLOW RAMS

For use with the KUKKO hydraulics range.

YRH
HY

YRH-202

DESCRIPTION

- Use as pull- and pressure cylinder.
- Single-acting with spring return.
- Complete with threaded pressure piece.
- Manufactured from high-strength, alloyed steel.
- All models have a CR-400 coupler and dust cap.

ADVANTAGE

- External threads on cylinder head, piston-rod internal threads and mounting threads on the cylinder bottom enable easy assembly (applies to most models).
- Preloaded return spring increases the entry speed and thus improves performance.
- The integrated wiper removes impurities on the piston and extends the service life of the cylinder.

PRODUCT INFORMATION

LIFT CYLINDER

For use where other cylinders are too big.

YSM
HY

YSM-100

DESCRIPTION

- Pistons made of hard chrome high quality steel.
- All models have a CR-400 coupler and dust cap.

ADVANTAGE

- Mounting holes make assembly easy.
- Grooved piston ends mean pressure pads are not needed.
- Preloaded return spring increases the entry speed and thus improves performance.
- The integrated wiper removes impurities on the piston and extends the service life of the cylinder.

HYDRAULIC 2-JAW PULLER WITH SWIVELING JAWS, WITH
HYDRAULIC HOLLOW RAM FOR PUMP DRIVE

Y-205
HY

For removing particularly large and tight bearings, gears, discs, etc.

Y28-205

DESCRIPTION

- Hydraulic hollow ram.
- 2-jaw puller.
- Swivelling puller jaws.

ADVANTAGE

- Universal application thanks to adjustable depths.
- The larger the pulling force, the stronger the puller hook's grip on the workpiece to be removed.
- Almost all components available as replacement parts, time-saving order process thanks to numbering system.

PRODUCT INFORMATION

These pullers can also be used alternatively with the following separating devices:

HYDRAULIC 3-JAW PULLERS WITH ADJUSTABLE REACH, WITH HYDRAULIC HOLLOW RAM FOR PUMP DRIVE

Y28-11-X
HY

For pulling particularly tight bearings, gears, discs, etc.

Y28-11-1

DESCRIPTION

- High performance is guaranteed.
- Hydraulic hollow ram
- Standard pulling hook with adjustable depths.
- Parallel pulling hooks in every position, even with full load.
- Pulling hooks with infinitely variable adjustment on the cross-beam.

ADVANTAGE

- Pulling hooks can be adjusted lengthwise and to meet the required clamping depths.
- Turning the pulling hooks enables them to be used both internally and externally.
- Suitable for pulling asymmetric workpieces.
- Almost all components available as replacement parts, time-saving order process thanks to numbering system.

SEPARATORS FOR HYDRAULIC PUSH/PULL DEVICES

For removing ball bearings, roller bearings, inner races and other tight parts if there is not enough space to use pulling hooks.

Y-15
HY

Y-215-2

DESCRIPTION

- The sharp, wedge-shaped blades of the separator are pressed behind the part to be removed and, in this process, push between the bearing and seat.
- The wedge-shaped separator jaws are secured underneath the component to be removed.
- The large supporting surfaces protect the parts to be pulled.
- The separators of the Y-15 series require the pulling devices of the Y-180 series.

ADVANTAGE

- Ultimate stability when removing, as the separator and pulling device are screwed firmly together.
- Almost all components available as replacement parts, time-saving order process thanks to numbering system.

HYDRAULIC EXTERNAL PULLER SETS

For removal of particularly large and tight bearings, gears, discs, etc. in industry and commercial vehicles.

YX8-X56
HY

DESCRIPTION

- Large range for use in industry, commercial vehicles and farm machinery.
- Hydraulic hollow ram.
- Hydraulic hand pump, gauge and hoses.
- 2- and 3-jaw pullers.

ADVANTAGE

- Arranged and space-efficient custody in the metal case.
- Almost all components available as replacement parts, time-saving order process thanks to numbering system.

HYDRAULIK

100 PROCENT BIG PLAYER

The Big Player series includes mobile KUKKO pullers for heavy industry, rail, commercial vehicles, power plants, and other applications where large bearings, gears, or similar parts have to be dismantled.

With a pulling strength of up to 75 t, the Big Players are the solution for really large pulling operations.

MOBILE HYDRAULIC PULLER "GOLIATH"

GOLIATH-X56
HY

Mobile KUKKO puller for heavy industry, railways, power plants and other applications where large bearings, gear wheels or similar parts must be dismantled.

DESCRIPTION

- With a pulling force of up to 50 tonnes, it is ideal for really big pulling jobs.
- The central pressure spindle of the GOLIATH puller can be attached to the part to be pulled very easily and precisely by just one person thanks to the combination of hydraulic height adjustment and mechanical fine adjustment.
- The puller can be positioned easily and conveniently using the Y-shaped mobile support frame with four easy-rolling, lockable castors, which also ensures stable placement for all applications.
- The pulling force is applied by a cylinder ram equipped with a central pressure spindle, which is actuated by a two-stage, electrically-driven hydraulic pump with remote motor control.
- This avoids exposing users to the risk of injury from flying parts.

ADVANTAGE

- The puller can be used with 2 or 3 jaws.
- An accessory separator fixture can be fitted quickly and easily.
- Modular system can be expanded with other extractor types.
- Almost all components available as replacement parts, time-saving order process thanks to numbering system.

MOBILE HYDRAULIC SEPARATOR "GOLIATH"

GOLIATH-X18

HY

Mobile KUKKO puller for heavy industry, railways, power plants, and other applications requiring the removal of large bearings, gear wheels, or similar parts.

DESCRIPTION

- With a pulling force of up to 30 tonnes, it is ideal for really big pulling jobs.
- The central pressure spindle of the GOLIATH puller can be attached to the part to be pulled very easily and precisely by just one person thanks to the combination of hydraulic height adjustment and mechanical fine adjustment.
- The puller can be positioned easily and conveniently using the Y-shaped mobile support frame with four easy-rolling, lockable castors, which also ensures stable placement for all applications.
- The pulling force is applied by a cylinder ram equipped with a central pressure spindle, which is actuated by a two-stage, electrically-driven hydraulic pump with remote motor control.
- This avoids exposing users to the risk of injury from flying parts.

ADVANTAGE

- The model is equipped with a separator, but can also be combined with hydraulic systems.
- Modular system can be expanded with other extractor types.
- Almost all components available as replacement parts, time-saving order process thanks to numbering system.

AXLE – THE STRONGEST IT ITS CLASS

QUALITY
MADE IN
GERMANY

KING PIN PRESS "AXLE"

For pressing king pins in and out on the front axles of commercial vehicles.

AXLE
HY

DESCRIPTION

- Mobile, hydraulic king pin press with pneumatic pump drive.
- Robust press unit.
- Alignment to the millimeter through spindle with fine thread.
- Mobile use through 4 steering rollers.
- 360° swivel unit enables dual use for pressing in and out.

ADVANTAGE

- The press can be used with axles that are either installed or have been dismantled.
- Easy handling through pneumatic hydraulic pump.

PRODUCT INFORMATION

Pin and bush set available as accessories.

HYDRAULIC PULLER "DAVID"

Hydraulic, mobile, 3-arm puller with adjustable clamping depth.

DAVID
HY

DESCRIPTION

- Pulling hooks can be adjusted lengthwise to meet the required clamping depths.
- Parallel pulling hooks in every position, even with full load.
- The three-arm design ensures that the load is distributed evenly and that the part to be removed is held securely.
- Lever activation, swivelling 360° for ergonomic operation from out of the work area.
- Lowering activation on the basis of an easily accessible rotary valve, for the controlled lowering of the load beyond the work area for accident prevention.

ADVANTAGE

- Lever activation removeable.
- Easy positioning with four steering rollers.
- Flat design enables work on low-lying vehicles.
- Overload security for avoiding damage or injuries.

HYDRAULIC KING PIN PRESS "AXLE"

AXLE
HY

For the quick pressing in and out of all common king pins on the front axles of commercial vehicles.

DESCRIPTION

- The press can be used with axles that are either installed or have been dismantled.
- Time-saving and universal use.
- For quick and easy positioning on the vehicle, the work unit swivels and can be preset.
- Lever activation, swivelling 360° for ergonomic operation from out of the work area.
- Lowering activation on the basis of an easily accessible rotary valve, for the controlled lowering of the load beyond the work area for accident prevention.

ADVANTAGE

- Lever activation removeable.
- Easy positioning with four steering rollers.
- Flat design enables work on low-lying vehicles.
- Overload security for avoiding damage or injuries.

ENGINE TILTING HOIST URANOS WITH SELF-LOCKING WORM GEAR

For all repair and maintenance
always state the serial number!

ENGINE TILTING HOIST "URANOS"

Universally applicable for directing the incline during removal and mounting of all types of engines.

URANOS

HY

W-3180

DESCRIPTION

- With self-locking worm gear and 3-point suspension

ADVANTAGE

- If necessary, shackles, etc. with the required load-bearing capacity may be used as a means of connection.
- The hand chain can be operated in all angular positions without impairment.
- The desired incline is securely held by the built-in, self-locking worm gear as soon as the operation of the hand chain stops.
- The large gear ratio of the worm gear, with maximum efficiency, guarantees expeditious handling in all situations.
- A detailed instruction manual is included with each engine conductor.

INDUCTIVE HEATER

For universal use when heating bearings and other rotationally symmetrical workpieces.

Y-IH

DESCRIPTION

- Quick, even and continuous heating of the workpiece.
- The bearings can be pulled vertically across the yoke (normal heating process).
- Individual settings provided by temperature and time programming.

ADVANTAGE

- Bearings are easier to mount if pre-heated.
- Only the workpiece is heated up.
- Always fits due to various yokes.
- The temperature can be monitored at all times with the integrated display.

ACCESSORIES FOR HYDRAULIC PULLERS

Y205/206
HY

For use with pullers in the KUKKO line of hydraulic products.

Y205-00

Y205-20

Y206-30

DESCRIPTION

- The KUKKO product range includes high-pressure hydraulic hand pumps, pressure gauges and hoses, as well as various connections and adapters that are designed for durability and ease of use. The entire series is also equipped with various safety features that provide reliable performance and occupational safety.
- Almost all components available as replacement parts, time-saving order process thanks to numbering system.

PRODUCT INFORMATION

PRESSURE PADS FOR HOLLOW RAMS

Hollow rams can be used both for pushing and for pulling.

The pressure pads listed below screw into the female thread of the piston rod.

The center spindle can be placed directly in the threaded pressure pad or,

if a plain hole pad is being used, fastened and adjusted with the quick-adjusting nut.

If a closed, serrated pressure pad is used, the cylinder can function as a hydraulic jack.

PROTECTIVE BLANKETS FOR EXTRACTION JOBS

UFP

ST

UFP-2

DESCRIPTION

- For disassembly and extraction jobs, the application of greater force is often necessary. It can happen that whole parts abruptly detach themselves, that parts break, disassemble themselves and debris starts flying around uncontrollably. To prevent these potential risks of an accident, KUKKO accident protection tarps can be used to safely enclose workpieces and tools before any force is applied.
- Highly elastic, tear-resistant and oil-resistant material.

ADVANTAGE

- The transparent blanket enables close observation, control and monitoring of all removal processes safely while working.

PRECAUTIONARY NOTES AND HELPFUL HINTS

All tools must always be used for the intended purposes under the envisioned conditions and within their postulated limitations.

Check the condition of your tools at regular intervals, and replace any damaged or worn parts.

Keep the threads of all spindles, heads, etc. clean and well oiled.

Before you start work, acquaint yourself with the proper use of the tool or tools in question, with due attention to pertinent safety measures.

If anything at all is unclear about any of the above, it is best to call the factory for some firsthand advice.

Prior to starting work, make sure that the pulling tool is in good working order.

Double-check the tool for correct mounting, and monitor the forces incidental to the pulling process.

Never violate the maximum load data prescribed for the tool in question. Use a torque wrench (for mechanical/pressure-screw-driven tools) or a pressure gauge (hydraulic/pump-driven tools) to keep tabs on the applied forces.

Always wear suitable personal protective equipment, including protective goggles.

Always wrap the pulling tool and the workpiece in a protective blanket as a precaution against the potential effects of sudden release.

If the tool appears to be overloaded, works sluggishly, or is otherwise negatively conspicuous, interrupt the pulling process, and replace the tool with a larger model.

Never use an electric- or pneumatic-powered impact/hammer drill for driving a pulling tool.

Never use extensions to increase the applied torque.

Never alter a pulling tool or related product in any way.

Since heat detracts from the thermal properties of steel, and since some parts require heating to facilitate their removal, remember to never heat the pulling tool along with the part.

TECHNOLOGY

ARMLOCK

The T-form guarantee maximum stability due to the mounting of the pulling jaws in the sliding part.

AUTOGRIP

Automatic tensioning and self-centering of the pulling jaws.

EASYSREW

Easy turning with reduced friction resistance thanks to built-in pressure bearing.

GLIDE & FIX

Particularly easy and quick movement of the pulling jaws on the cross-beam, due to optimized geometry.

HYDRAULICS

Pulling tools with hydraulic function.

LIGHTSHIFT

Smooth moving and self-retaining pulling jaws with internal spring washer.

PULLBACK

Automatic withdrawal of the splitting chisel through the actuator screw.

PULLPO

Secure, simple mounting and lever-translated self-tensioning of the pulling jaws due to the special cross-beam shape.

PUSH-TO-UNLOCK

Quickly secured and easily released via the unlocking system.

QUICK-ADJUST

The knurls allow a tool-free, quick release and movement of the pulling jaws on the cross-beam.

SELFLOCK

Centric tightening of the pulling jaws by means of a locking bolt prevents the jaws from moving or slipping.

SWITCH

Optimal adaptation of the spindle to the shaft through a two-sided spindle tip.

WAVESPRING

Takes 50 % less space and has a compact, maintenance-free design thanks to innovative spring technology.
